

FADI THOMAS

PRODUCT ENGINEER | AI-POWERED PRODUCTS · TECHNICAL LEADERSHIP

+49 157 3442 1174 • Frankfurt am Main, Germany • fadiamg.swe@gmail.com • linkedin.com/in/fadithomas

PROFILE

7+ years of software engineering experience — full-stack product development across TypeScript/Node.js, React, Java and Python, from early-stage products to enterprise platforms — now working at the intersection of **product, AI and engineering**. I take features from discovery to delivery: framing the problem with stakeholders, scoping trade-offs, shaping the solution, and owning the build. Recent work centres on **AI-powered product features** — LLM-based document understanding, agentic workflows, and automation pipelines — and on connecting business intent to what actually ships. Comfortable working directly with C-level and cross-functional partners, and leading delivery through architecture, code review and mentoring.

FOCUS AREAS

- Product:** Continuous discovery, PRDs & user flows, requirement framing, scoping & prioritisation, roadmap input, stakeholder alignment, metrics & KPI definition
- AI:** LLM integration (Claude, vision models), AI agents, prompt engineering, RAG-style document pipelines, AI-assisted development (Claude Code, Cursor), n8n workflow automation
- Leadership:** Feature ownership end-to-end, technical direction, code review & mentoring, cross-team collaboration, working with non-technical stakeholders

PROFESSIONAL EXPERIENCE

Listo Global (Vensure) — Product Engineer

Jul 2025 – Present

- **Product ownership:** Drive features from discovery to release — running requirement conversations directly with the CEO, CFO and CX Director, translating business goals into scoped, sequenced work, and pushing back on scope where the trade-off didn't hold.
- **AI product development:** Designed and built a document-understanding pipeline (pdf2pic + Claude Vision + BullMQ) that converts unstructured client PDFs into structured, validated payroll data — removing a manual data-entry step from the operations workflow.
- **Product design & delivery:** Shipped a payroll interface with dual-source upload and field mapping, letting operations reconcile client data formats without engineering involvement.
- **Technical leadership:** Own features end-to-end — architecture, implementation, testing (Jest), code review and deployment — and raise the bar on quality through review feedback and pairing.
- **Stack:** TypeScript, tRPC, Prisma/Drizzle, PostgreSQL, Redis + BullMQ, React, Tailwind, Zod, Figma-to-component workflows.

Kia Europe GmbH — Data Science & Analytics, Frankfurt

Jul 2025 – Aug 2026

- **Stakeholder partnership:** Worked with product and business teams to turn open-ended business questions into concrete data requirements, then delivered the dashboards and metrics that answered them.
- **Decision enablement:** Designed and maintained Tableau dashboards used across teams for KPI tracking and operational decision-making.
- **Analytics:** Built and optimised SQL queries over large operational datasets to support reporting and cross-team analysis.
- **Data preparation:** Cleaning, transformation and exploratory analysis in SQL and Python to make datasets usable for reporting and product work.

BillMyPlate — Full Stack Engineer

Nov 2023 – May 2024

- Built an Angular 16 SSR application that improved site responsiveness by 47%.
- Developed real-time monitoring with Socket.IO so the team could observe user experience issues and resolve them the same day.
- Automated MongoDB migrations on application startup; wrote e2e test suites and worked through daily PRs and code reviews with the team.

Scholastic — Full Stack Engineer

May 2022 – Aug 2023

- Led the migration of a legacy internal UI library from Angular to React (TypeScript), defining the reusable component set adopted by multiple product teams.

- Developed and maintained backend services in Java 12 and Spring Boot; contributed to the move from monolith to microservices.
- Implemented Docker and managed Kubernetes clusters, reducing deployment times by 40%.

IST Networks — Front End Engineer

Nov 2020 – May 2021

- Built and maintained internal dashboards (TypeScript, React, Redux, Tailwind) used by operations teams to monitor reported issues.
- Integrated external systems — including Vodafone reporting — with internal services, coordinating requirements across both sides.

RiseUp — Full Stack Engineer

Jul 2019 – Aug 2020

- Delivered the RiseUp Academy platform end-to-end (React + Django), covering both the learner-facing product and backend APIs.
- Built an internal dashboard that let the content team publish directly to the main site, removing a recurring engineering dependency.

Upwork — Software Engineer (Freelance)

Jul 2017 – Dec 2018

- Delivered web projects for international clients — gathering requirements directly, scoping the work, and shipping against agreed timelines.

SELECTED PROJECTS

AI Document Processing Pipeline

- Queue-backed service (BullMQ, Redis) that rasterises PDFs, extracts structured fields with Claude Vision, and validates the output before it reaches downstream systems.

Raseedi WebApp — Smart Wallet Optimisation

- Business-facing web app that matched advertisers to mobile users by budget classification.

Enrollet — Central Admission Service for Egyptian Universities

- Graduation project: a uni-assist-style admission platform simplifying applications and giving newer universities visibility.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript, Python, Java, SQL
Frontend:	React, Next.js, Redux, Angular, Tailwind CSS, React Hook Form, Zod
Backend:	Node.js, NestJS, Express, tRPC, REST, GraphQL, Django, Spring Boot
Data:	PostgreSQL, MySQL, MongoDB, Redis, Prisma, Drizzle, Tableau, ETL
AI & Automation:	LLM integration, Claude Vision, AI agents, prompt engineering, n8n, BullMQ pipelines, Claude Code / Cursor
Infrastructure:	Docker, Kubernetes, AWS, CI/CD, Jenkins, Datadog
Practices & Tools:	Agile, TDD/BDD, code review, Jira, Git, Figma, Whimsical, Jest, Puppeteer

EDUCATION

M.Sc. Global Software Development — Hochschule Fulda, Germany

2024 – Present

B.Sc. Electronics & Computer Engineering — Nile University, Egypt (GPA 3.22 / 4.0)

2015 – 2020

CERTIFICATIONS, RECOGNITION & LANGUAGES

- **Continuous Discovery Habits** — Teresa Torres (product discovery, opportunity solution trees, customer interviewing)
- Android Development Nanodegree · Front End Development Track · IBM Internship (Blockchain) · BlueCloud Internship (Microsoft CRM)
- 2nd Place, Differential Equations & 2nd Place, Linear Algebra — Nile University Research Forum

Languages: English — Advanced (IELTS C1 / 7.0) · German — A2 · Arabic — Native
